B2B SEO: 90 days to *pipeline.*

A week-by-week plan for B2B teams that need search to produce qualified leads, not just traffic. Measurement first, money pages next, then the content, links and conversion work that compounds.

FOR	TEAM	INCLUDES
SEO and marketing leads at B2B companies	One marketer, a writer, and some developer time	Checklists, a keyword map, a page brief and a weekly scorecard

Who this is for

B2B companies selling services or software with a considered purchase: several people involved, a sales conversation, and a cycle of weeks or months. If most of your buyers search for what you sell before they talk to anyone, this plan applies.

What 90 days can and cannot do

In 90 days you can fix measurement and technical problems, publish or rebuild the pages closest to revenue, and start a content and authority engine. Rankings for competitive terms usually take longer to settle. The plan is built so the earliest work is the work most likely to pay back first.

HOW TO READ THE PLAN

Phases overlap on purpose. Technical fixes continue while you write; links start once there are pages worth linking to. Each section ends with a checklist you can tick in a team meeting.

THE PRINCIPLE

Why B2B SEO should be judged on pipeline

Traffic is easy to grow and easy to misread. A B2B site can double its visitors with top-of-funnel articles and see no change in sales. Judge SEO on the qualified leads and opportunities it produces.

That changes the order of work. Instead of starting with the highest-volume keywords, start with the searches people make when they are close to buying: the service name, comparisons, "alternatives to", pricing, and problems your product solves. Those pages have lower volume, but each visit is worth far more.

An example from our work

Paycape worked with us for five months in Q3 2025. The published case study reports:

50 days
to first result

~15,000
monthly organic visitors

50%
of conversions came from inbound

Source: TechDella's published Paycape case study (techdella.com/case-studies/paycape/). Results depend on the market, the starting point and the budget, and are not a forecast for your business.

The chain you are building

Link in the chain	What has to be true	Covered on
Measured	You can see which pages and queries produce leads and deals.	Page 5
Crawlable	Search engines can reach, render and index your important pages.	Pages 6–7
Relevant	A page exists for each buying search, matching its intent.	Pages 8–11
Trusted	Content shows real experience; other sites reference you.	Pages 12–15
Converting	Visitors who are ready can act in one step.	Page 16

OVERVIEW

The 90 days at a glance

Weeks	Focus	Main outputs	Owner
1–2	Measurement and technical audit	Key events in GA4, CRM source fields, Search Console baseline, prioritized technical fix list	Marketing + developer
3–4	Keyword research and mapping	Keyword map: one primary keyword per page, intent labelled, gaps listed	Marketing
5–8	Money pages	Service, solution and comparison pages rebuilt or created from briefs	Marketing + writer + design
5–11	Supporting content	First cluster articles and glossary-style definitions linked to money pages	Writer + subject expert
7–13	Internal links and authority	Link rules applied sitewide; first digital PR and partner placements	Marketing
9–13	Conversion	Offers, CTAs and forms tested on the top organic landing pages	Marketing + design
Every week	Scorecard	One-page review of leading and lagging indicators	Marketing lead

Before week 1

- ☐ **Name an owner** for the plan and a weekly 30-minute review slot.
- ☐ **Agree the target**: qualified leads or opportunities from organic search by day 90 and day 180.
- ☐ **Get access**: CMS, Search Console, GA4, CRM, DNS and the hosting or developer contact.
- ☐ **Book subject-expert time**: one hour a week with someone who does the work you sell. Their input is what makes content worth ranking.
- ☐ **Collect sales input**: the ten questions prospects ask most, the competitors they mention and why deals are lost.

RESOURCING GUIDE

The plan assumes roughly one marketer at half time, a writer producing one to two substantial pieces a week, a designer for page layouts and a few days of developer time in the first month. Fewer resources means stretching the timeline, not skipping phases.

DAYS 1–14

FOUNDATIONS

Measure before you change anything

If you cannot connect an organic visit to a lead and a deal, you will not know which pages to invest in. Fix this first, and record a baseline so you can show progress later.

- ☐ **Search Console is verified** as a Domain property, plus URL-prefix properties for each subdomain you report on.
- ☐ **GA4 key events** exist for every lead action (contact form, booking, demo, resource download) and have been tested.
- ☐ **Forms pass source data to the CRM**: landing page, referrer, first-touch and last-touch UTM values.
- ☐ **The CRM has a lead source field** with a fixed value for organic search, plus a free-text "How did you hear about us?".
- ☐ **Bing Webmaster Tools is verified**; Bing also powers some AI assistants' web results.
- ☐ **A landing-page report** shows organic sessions, leads and qualified leads per page.

Baseline (record on day 1)

Metric	Last 3 months	Same period last year	Source
Organic clicks (Search Console)			
Non-brand organic clicks			
Indexed pages vs. pages in sitemap			
Organic leads (all)			
Organic qualified leads			
Opportunities with organic first touch			
Queries ranking in positions 4–15 with buying intent			

To separate brand from non-brand clicks in Search Console, filter queries that do not contain your brand name and its common misspellings.

DAYS 1–14

TECHNICAL

Technical health check

Crawl the site with a crawler of your choice and read Search Console's Pages report. Fix what blocks important pages first; leave cosmetic warnings for later.

Crawling and indexing

- ☐ **robots.txt does not block** pages, CSS or JavaScript that important pages need.
- ☐ **Every important page is indexable**: no stray `noindex`, returns 200, and is in the XML sitemap.
- ☐ **Sitemaps list only canonical, indexable URLs** and are submitted in Search Console.
- ☐ **Each page has one self-referencing canonical**; parameter variants (UTM, filters) point to the clean URL.
- ☐ **One version of the site resolves**: HTTPS, one hostname (www or not), consistent trailing slashes, all others 301 in one hop.
- ☐ **No redirect chains or loops** on internal links; internal links point at final URLs.
- ☐ **Broken internal links and 404s** with traffic or backlinks are fixed or redirected to the closest relevant page.
- ☐ **"Crawled – currently not indexed" and "Duplicate without user-selected canonical"** in Search Console are reviewed; thin or duplicate pages are merged or improved.
- ☐ **Staging and development sites** are password-protected and not indexed.

Rendering and content access

- ☐ **Main content is in the initial HTML**, not loaded only after user interaction. Check with URL Inspection's rendered HTML.
- ☐ **Navigation uses real links** (`<a href>`) that crawlers can follow.
- ☐ **Important text is not inside images**; images have descriptive alt text.
- ☐ **Pagination and filters** do not create thousands of near-duplicate indexable URLs.

DAYS 1–14

TECHNICAL, CONTINUED

Speed, structure and markup

Page experience

- ☐ **Core Web Vitals pass** for your main templates in Search Console (based on real-user data). Google's "good" thresholds: LCP 2.5 s or less, INP 200 ms or less, CLS 0.1 or less.
- ☐ **Hero images are sized and compressed**, served in modern formats, and not lazy-loaded.
- ☐ **Third-party scripts** (chat, heatmaps, tag managers) are audited; anything unused is removed.
- ☐ **Mobile layout works**: no horizontal scroll, readable text, tap targets large enough.

Site structure

- ☐ **Money pages are within two or three clicks** of the homepage.
- ☐ **URLs are short and descriptive**. Do not change URLs that already rank unless you have a reason and a redirect.
- ☐ **No orphan pages**: every indexable page has at least one internal link.
- ☐ **Breadcrumbs** on deeper pages, marked up with `BreadcrumbList`.

Structured data

- ☐ `Organization` on the homepage with logo and official profiles (`sameAs`).
- ☐ `Article` or `BlogPosting` on articles, with author and dates.
- ☐ **Markup matches what is visible** on the page and validates in the Rich Results Test.
- ☐ **No markup for things Google no longer shows or does not allow**, such as self-serving review stars for your own services.

DAYS 15–30

RESEARCH

Keyword research that starts at the bottom of the funnel

List the searches people make when they are choosing a provider or a product. Validate volume in your keyword tool and Search Console, but do not drop a buying keyword just because its volume is small.

Page types, in priority order

Page type	Example searches	Intent
Service / product	"B2B SEO agency", "email marketing services", "[category] software"	Choosing a provider
Industry / use case	"SEO for fintech", "[category] for healthcare"	Choosing, with context
Comparison and alternatives	"[competitor] alternatives", "[you] vs [competitor]"	Shortlisting
Pricing	"[category] pricing", "how much does [service] cost"	Budgeting
Problem-aware	"why is our [metric] dropping", "how to fix [problem]"	Researching a fix
Definitions and guides	"what is [term]", "[topic] checklist"	Learning

Where to find the keywords

- ☐ **Search Console**: queries where you already get impressions in positions 4–20. These are the fastest wins.
- ☐ **Sales calls and CRM notes**: the words prospects use to describe their problem.
- ☐ **Competitors' top pages** in your keyword tool, filtered to commercial intent.
- ☐ **Google's results page itself**: "People also ask", related searches, and the types of pages that rank (if every result is a list article, a service page will struggle).
- ☐ **AI assistants**: ask them your buyers' questions and note which sources they cite.

CHECK INTENT BEFORE YOU WRITE

Search the keyword and look at the top ten. If they are all guides, the searcher wants to learn, not to buy: answer with a guide that links to your service. If they are service pages from providers, a service page is the right format.

DAYS 15–30

TEMPLATE

The keyword map

One primary keyword per page and one page per primary keyword. If two pages target the same search, merge them or change one target.

Primary keyword	Secondary keywords	Intent	Volume	Current rank	URL (existing or new)	Action

Actions: **keep** (performing), **refresh** (improve existing page), **create** (new page), **merge** (combine competing pages, 301 the weaker one), **prune** (remove pages with no traffic, links or purpose).

Prioritize the map

Start with rows that combine buying intent, an existing page ranking in positions 4–15, and a clear link to something you sell. Then new money pages. Then supporting content.

DAYS 30–60

MONEY PAGES

The page brief

Every money page starts as a one-page brief. It keeps writers, designers and subject experts aligned, and makes review faster.

URL and page type	
Primary keyword / secondary keywords	
Searcher intent What they want to do after reading	
Audience Role, company type, stage	
Answer-first intro 2–3 sentences that directly answer the search	
Angle What we know that the current top results do not say	
Proof Case study, numbers with source, screenshots, quotes with permission	
Sections (H2s)	
Internal links To and from which pages	
Call to action	
Author / reviewer	

DAYS 30–60

MONEY PAGES

On-page checklist

- ☐ **Title tag** uses the primary keyword naturally, roughly 60 characters or fewer so it is less likely to be cut, brand at the end.
- ☐ **Meta description** written for the click: what the page offers and why it is different. Not copied from the first sentence.
- ☐ **One H1** that matches the search and the title's promise.
- ☐ **The intro answers the query** in two or three sentences.
- ☐ **H2s cover what the buyer needs to decide**: problem, approach, proof, process, pricing or how to start, FAQ.
- ☐ **Proof is specific and sourced**: named clients, numbers with timeframes, quotes with permission.
- ☐ **A clear primary CTA** appears after the intro and again at the end.
- ☐ **At least three internal links** to related services, case studies or guides, with descriptive anchor text.
- ☐ **Images** have descriptive file names and alt text; diagrams are real HTML or SVG where possible.
- ☐ **Tables and lists** are real HTML, not images.
- ☐ **FAQ answers real objections** from sales calls, written as visible content.
- ☐ **Author and reviewer** are named, with a "last reviewed" date.
- ☐ **Structured data** fits the page type and matches visible content.
- ☐ **The page loads quickly on mobile** and works without JavaScript for its main content.

LOCATION AND INDUSTRY PAGES

Pages for each city or industry help only when each one carries real, specific substance: clients in that market, local channels and costs, industry rules. Pages that swap one word in the same template are what Google's spam policies call doorway pages.

DAYS 30–75

CONTENT

Supporting content and the quality bar

Supporting articles answer the questions buyers ask before they are ready to talk, and pass relevance and links to your money pages. Fewer, better pieces beat a high-volume calendar.

Build clusters, not one-off posts

For each money page, plan four to eight supporting pieces that answer the questions around it: definitions, how-tos, comparisons, mistakes, checklists. Each piece links to the money page, and the money page links back to the most useful ones.

CLUSTER PLAN

Money page	Supporting piece	Keyword	Format

The quality bar

Google's guidance asks whether content is written for people, shows first-hand experience and expertise, and would leave a reader satisfied. Its spam policies treat mass-produced pages made mainly to rank (by people or AI) as scaled content abuse. In practice, before anything is published:

- ☐ It includes something original: our data, an example from our work, a screenshot, or a clear opinion.
- ☐ A subject expert has reviewed it and is named.
- ☐ Every fact and number has a source.
- ☐ It answers the question better than the current top result, not just at more length.
- ☐ If AI helped draft it, a person has rewritten, checked and added to it.

DAYS 30–75

CONTENT

Production workflow and calendar

A simple, repeatable pipeline gets more good pieces published than a heroic effort. Every piece passes the same stages.

01 **Brief.** Keyword, intent, angle, proof and internal links agreed before writing (use the page brief).

02 **Expert input.** A 20-minute interview with the person who does the work. Record it.

03 **Draft.** Answer first, then the detail. Mark anything unverified for checking.

04 **Expert review.** Accuracy, missing nuance, examples.

05 **Edit and SEO check.** Title, meta description, headings, links, images, structured data.

06 **Publish and link.** Add links from at least two existing relevant pages.

07 **Refresh.** Review money pages quarterly and guides every six months, or sooner when clicks drop.

SIX-WEEK CALENDAR

Week	Piece	Supports	Writer	Expert	Status
1					
2					
3					
4					
5					
6					

DAYS 45–90

INTERNAL LINKS

Internal links

Internal links are the part of authority you fully control. They tell search engines which pages matter most and how topics relate.

Rules to apply sitewide

- ☐ **Every service page links** to two or three related services, its industry pages and its case studies.
- ☐ **Every guide links** to one service page and to the definitions it uses.
- ☐ **Every definition or glossary page links** to one service and to related terms.
- ☐ **Case studies link** to every service they used.
- ☐ **Anchor text describes the destination** ("technical SEO audit"), not "click here".
- ☐ **Your strongest pages** (most backlinks and traffic) link to the money pages you are pushing.
- ☐ **No orphans**, and no important page more than three clicks deep.

Find quick wins

Search your own site for mentions of a money page's topic (`site:yourdomain.com "topic"`) and add a link from each relevant mention. Then check your top-linked pages in Search Console's Links report and add links from them.

Target money page	Pages that should link to it	Added?

DAYS 45–90

AUTHORITY

Authority without buying links

Links from relevant, reputable sites still help pages rank. Buying links, or trading them at scale, breaks Google's spam policies and can lead to manual actions. Earn them with things worth citing.

Tactic	How it works	Effort
Original data	Publish numbers from your own work or a survey of your customers (anonymized, with permission). Journalists and bloggers cite data.	High, lasting
Expert commentary	Answer journalist requests in your niche; offer a named expert for quotes on industry news.	Medium, ongoing
Partners and integrations	Get listed on partner, integration and agency directory pages you genuinely belong on.	Low
Customer stories	Clients often link to case studies and launch announcements about work you did together.	Low
Free tools and templates	Useful calculators, checkers and templates attract links over time.	Medium
Podcasts and events	Guest appearances usually come with a show-notes link and a relevant audience.	Medium
Unlinked mentions	Find mentions of your brand without a link and ask politely for one.	Low

Avoid

- ☐ Paid links without `rel="sponsored"` (or `nofollow`).
- ☐ Guest posts written mainly to place keyword-rich links.
- ☐ Link exchanges and private blog networks.
- ☐ Hosting third-party content on your domain that you do not edit (site reputation abuse).

DAYS 60–90

CONVERSION

Turn visits into conversations

Organic visitors arrive at different stages. Give each stage an obvious next step, and make the high-intent one as easy as possible.

Visitor stage	Typical landing page	Offer
Ready to talk	Service, pricing, comparison	Book a call, request an audit or demo
Evaluating	Case studies, industry pages	Talk to someone who worked on a similar project; see more examples
Learning	Guides, definitions	A checklist, template or tool; newsletter

Conversion checklist for your top 10 organic landing pages

- ☐ A CTA is visible on the first screen on mobile.
- ☐ The offer matches the page's intent (no "book a demo" as the only option on a beginner's guide).
- ☐ Forms ask only what sales needs; optional fields are marked.
- ☐ Proof sits near the CTA: a result, a logo used with permission, or a short quote.
- ☐ The thank-you page sets expectations and offers the next step.
- ☐ Pop-ups do not cover content for mobile visitors arriving from search.
- ☐ Every form is tested monthly: submission reaches the CRM with source data.

Page	Organic visits	Conv. rate	Change to test

EVERY WEEK

The weekly scorecard

Review leading indicators weekly and lagging indicators monthly. Leading indicators tell you whether the work is happening and being noticed; lagging indicators tell you whether it pays.

Indicator	Wk 1	Wk 2	Wk 3	Wk 4	Notes
Leading (weekly)					
Pages published or refreshed					
Technical fixes shipped					
Non-brand impressions (Search Console)					
Buying keywords in top 10					
New referring domains					
Lagging (monthly)					
Non-brand organic clicks					
Organic leads / qualified leads					
Opportunities with organic touch					
Revenue influenced by organic					

READING THE SCORECARD

Impressions usually move before clicks, and clicks before leads. If impressions rise but clicks do not, work on titles and descriptions. If clicks rise but leads do not, work on intent match and conversion. If nothing moves after eight weeks of steady publishing, revisit the keyword map and the technical audit.

Search Console data has a delay of a few days; compare full weeks and keep the same date ranges.

AVOID

Mistakes we see most

Mistake	What to do instead
Starting with high-volume informational keywords	Start with buying searches and pages close to revenue; add learning content around them.
Reporting traffic, not pipeline	Connect Search Console, GA4 and CRM data in week 1 and report qualified leads by landing page.
Several pages targeting the same keyword	One primary keyword per page; merge or retarget competing pages.
Changing URLs during a redesign without redirects	Keep ranking URLs, or map every old URL to a new one with a single 301.
Publishing at volume without expert input	Fewer pieces, each with original evidence and a named reviewer.
City or industry pages that only swap a word	Build them only where you have local or industry proof to show.
Buying links	Earn them with data, expertise, partners and tools.
Forgetting existing pages	Refresh pages ranking 4–15 before writing new ones.
No owner for technical health	A monthly crawl and a Search Console review on the calendar.
Judging results at week 4	Use leading indicators early; judge pipeline at 90 and 180 days.

TIMING LAUNCHES

Google announces core updates on its Search Status Dashboard. If you can, avoid launching a redesign or a large migration while one is rolling out, so you can tell your changes apart from the update's effects.

SUMMARY

The 90-day checklist

Days 1–14

- ☐ Owner, target and weekly review agreed
- ☐ GA4 key events and CRM source fields tested
- ☐ Baseline recorded
- ☐ Technical audit done; fix list prioritized
- ☐ Blocking technical issues fixed

Days 15–30

- ☐ Sales questions and competitor list collected
- ☐ Keyword map complete with intent and actions
- ☐ Money pages prioritized
- ☐ Briefs written for the first money pages

Days 30–60

- ☐ First money pages rebuilt or published
- ☐ On-page checklist passed for each
- ☐ First cluster articles published with expert review

Days 45–90

- ☐ Internal-link rules applied sitewide
- ☐ No orphan pages
- ☐ Partner and directory listings claimed
- ☐ First data or expert-commentary piece pitched

Days 60–90

- ☐ Offers mapped to visitor stages
- ☐ Top 10 landing pages pass the conversion checklist
- ☐ First conversion test running

Day 90 review

- ☐ Scorecard compared with baseline
- ☐ Qualified leads and opportunities by landing page reported
- ☐ Next 90 days planned from what worked

NEXT STEPS

Run it yourself, or with us

Everything in this playbook can be done in-house. If you would rather have a team that has done it before, we run this plan as our B2B SEO service and report on pipeline from week one.

Want this plan run *for you?*

We start with a growth audit of your search, AI search and conversion setup, then agree a 90-day plan with clear owners and targets.

Request a growth audit →
